

Functional

Reports for: session 1, task rest.

▼ Summary

- Original orientation: LPS
- Repetition time (TR): 3s
- Phase-encoding (PE) direction: Could not be determined - assuming Anterior-Posterior
- Multi-echo EPI sequence: 3 echoes.
- Slice timing correction: Applied
- Susceptibility distortion correction: None
- Registration: FSL `flirt` with boundary-based registration (BBR) metric - 6 dof
- Non-steady-state volumes: 2

Alignment of functional and anatomical MRI data (coregistration)

This panel shows the alignment of the BOLD reference image to the anatomical (T1-weighted) image. The BOLD reference has been contrast enhanced and susceptibility-distortion corrected (if applicable) for improved anatomical fidelity. The anatomical image has been resampled into BOLD reference space, as well as the anatomical white matter mask, which appears as a red contour.
